Task Tracker Project : One of the Live Project

- A Task Tracker System is the software tool that helps individual or team to manage and track their task and workflow.
- It provides the centralized location where tasks can be created, assigned, tracked and monitored throughout the cycle.
- Task tracker systems typically include features such as task creation, assignment, and prioritization; deadline and milestone tracking; progress tracking; collaboration and communication tools; and reporting and analytics.
- Task tracker systems are highly beneficial for companies and organizations of all sizes, as they help improve productivity, efficiency, and collaboration. Here are some of the key benefits of using a task tracker system in companies

Employment drive for disabled students

HT Correspondent
punetext@hindustantimes.com

PUNE: In a bid to give equal job opportunity for all in the IT sector, Think Quotient, a Pune-based IT firm, will be training and recruiting disabled students in a one-day drive on December 15 (Sunday).

The company will train and assist these students for placements after giving free training of three or five months.

"It is a free job assistance drive for the disabled students who want to do a career in the IT field. Eligible candidates will be trained in software development and placed in IT companies.

"We will take interviews of candidates who enrol for the drive, train them for three-five months according to their capabilities and placement will be done," said Pranav Brahme, chief executive officer (CEO) and co-founder of the company, at a press conference in the city on Thursday.

Think Quotient Software Private Limited located at Nalstop chowk was started four years back by Brahme and his team. The firm started training students two years back and has placed 233 students in more than 100 IT firms.

"We have trained and placed three disabled students in the recent past. They have impeccable coding skills and logical aptitude. These skills acted as a catalyst to skyrocket their IT career. Our team polished their coding skills. With the collective efforts of students and trainers, we were able to place these students in IT firms. So, after receiving a good response from IT companies for placements of disabled students, we thought of organising a one-day drive," Brahme said.

Interested students can contact 9970110799 to enrol for the one-day drive.

Java & Advanced Java | Spring Boot | Data Science | ML & AI with Python | Angular 6 | QA Selenium | React JS
